

Times # Project Aurora: Systems Overview edited 3 times

> An open-source framework for distributed cloud synchronization.

1. Introduction

The **Aurora Project** aims to bridge the gap between edge computing and centralized data centers. This document serves as the primary technical specification for version `2.4.0-stable`.

2. Core Features

- **Real-time Sync:** Uses WebSockets for sub-100ms latency.
- **End-to-End Encryption:** AES-256-GCM by default.
- **Pluggable Storage:**
 - Amazon S3
 - Google Cloud Storage
 - Local Filesystem

jhgjhjg

3. Installation Guide

To get started, ensure you have Python 3.10+ installed.

Step 1: Clone the Repository

```
```bash
```

```
git clone https://github.com
```

```
cd aurora
```
